

SafeD-Con™

*Protecting health workers
from harm matters*

The SafeD-Con™ is designed to ensure that health practitioners are working in a safe environment while performing their duty. This is especially important when dealing with the spread of infectious pathogens such as tuberculosis and coronavirus. It can be installed in high human traffic areas such as quarantine centers, hospitals, and the nation's entry points like airports and CIQ centers across our borders.

This modular booth combines both safety and comfort features. The main components are the enclosure, dry-box gloves and sleeves, storage containers, speakers for delivering instructions to patients, air conditioning system, and air purifying system for decontamination purpose.

Every health screening center must have the SafeD-Con™ because protecting health workers from harm matters.

Industrial LABORATORIES

IN COLLABORATION WITH
